Some Methods - Increase BackLinks And Google Position

Good Evening, My name is Daniel Danon.br /

br /

In this article, Ill give you 10 methods to estimate your website quality.br /

br /

1. Indexed WebPages. Go to Google, and search for site:domain.combr /

Example: site:seekposition.combr /

Thats how I can see how many pages of my web sites Google has indexed. This is easy, and of course - more indexed webpages = better. That means more quality content. Forums might be excellent - Each topic = content+new page.br /

br /

2. Back Links. The number of people linking to you. Remember! Its not just about quality, and its not just about quantity. You need to combine both of them for good results. This is very very important. a

href=http://www.seekposition.com target=_blankCheck Backlinks/a.br /

br /

3. Age of domain. Many Search Engines like old domain. The older it is - the better. This is not much important - but still, it helps. When you are moving to a new site, Remember to do 301 transfers to your new websitebr /

br /

4. Page Rank - This factor is determined by Back Links only. Here its matter a bit more about quality. This is not a very important factor, but people tend to think it is.br /

br /

5. Title. Your web sites title. This is a VERY important factor relating your Google Position. You should a

href=http://www.seekposition.com target=_blankCheck Your Google Position/a at least every 6 days - To see if changes you made are making your position betterbr /

br /

6. Meta Tags. Meta Tags such as Keywords and Description are extremely important, so use them well. Meta Keywords is less important in this days, but Meta Description still plays an important act - when people search for your website, that is what theyll see.br /

br /

7. Domains. It has been determined that domain name containing the keywords can really help. Choose your domain name with caution - It might be a very important factor.br /

br /

8. Text. Text Text Text. Text is almost the most major part about ranking. It doesnt matter if you are number one, If you dont have what the visitor wants - hell leave. Search Engines LOVE text. especially quality text. But, dont copy text - you might get punished for that. Google treats text-copying really hard - so watch out.br /

br /

9. Bounces. Search Engines Can See if a visitor visits a webpage by searching it, and then immediately after entering - leave it. So dont try to rank in the wrong keywords. If you have a website about dogs - you dont need to be number one when people search for horses. This can extremely affect your Google position.br /

br /

10. UnKnown. No one can know what is all SearchEngines factors. Never trust someone who promises to make sure you will be number one. The same amount of money you pay - everyone else can pay.
